Professional Summary

Risk and insurance analytics professional with 4+ years of experience across underwriting, claims, and data-driven operations. Skilled in analyzing complex risk and exposure data to support pricing, coverage, and portfolio decisions, with applied AI and machine learning experience in insurance underwriting contexts.

Education

Quinnipiac University — MS. Applied AI & Business Analytics | Expected Fall 2026
National University of Science and Technology — BS. Risk Management & Insurance | Nov 2022

Relevant Experience

Fundraising Data & Reporting Analyst Intern Jun 2026 – Aug 2026
The Salvation Army – Southern New England Division Hartford, CT
• Managed end-to-end donor data and gift reconciliation across Salesforce and Raiser's Edge, collaborated with IT in a project to transform donor data into automated reporting workflows, enabling leadership to monitor giving trends, reconciliation status, and fundraising performance.

Research Assistant Apr 2025 – May 2026
Quinnipiac University, Office of Institutional Research & Assessment Hamden, CT
• Performed data validation, retention analysis, and regulatory reporting using Ellucian Colleague and Informer, auditing enrollment, academic, financial-aid, housing, and demographic data for institutional dashboards and federal IPEDS, NSLDS, and FVT/GE submissions.

Client Solutions Specialist Jan 2023 – Dec 2024
Zimbabwe Insurance Brokers Harare, Zimbabwe
• Analyzed client risk profiles, exposure data, and claims histories using a broker management system (BMS) to support coverage structuring, pricing decisions, and insurer/reinsurer negotiations.

Claims Analyst Nov 2020 – Dec 2022
First Mutual Holdings Harare, Zimbabwe
• Analyzed claims across multiple P&C portfolios using SSP Pure Insurance and Excel, identifying trends in cycle time, loss ratios, reserve adequacy, and overall claims performance.

Academic Projects & Research

• Designed an integrated architecture spanning underwriting, pricing, expected loss, claims, and risk controls, connecting business capabilities and decision logic to measurable portfolio outcomes. Built with Python, Excel, Next.js, GitHub and PostgreSQL, with Generative AI applications supporting development. https://aegis-underwriting-command-center.vercel.app/
• Designed audit-ready evidence studio linking underwriting decisions, business rules, cloud controls, and policy-as-code to frameworks including NIST, ISO, SOC 2, SOX, HIPAA, GDPR, and COBIT. https://aegis-evidence-studio-tppi.vercel.app/

Master's Thesis: Balancing Predictive Performance and Explainability in Insurance Underwriting
• Comparing traditional statistical and machine-learning underwriting models to evaluate predictive performance, calibration, fairness and interpretability.
• Used Python, Scikit-learn and XGBoost to develop and compare underwriting models, MLflow to track experiments and model versions, and SHAP to assess risk drivers, transparency and fairness.

Technical Skills

Analytics & BI: SQL, Power BI, Excel, Tableau, SAP BusinessObjects, SAP BW, SPSS
Programming & ML: Python, R, SHAP, MLflow
Insurance & Risk: Underwriting, Claims, Pricing, Loss Ratios, Reserving, Fraud Indicators, Risk Scoring
Automation & Cloud: Power Automate, AWS SageMaker, Cloud Custodian, GitHub
